

# AI-Powered Payment Verification System

**Vapi AI + Make.com + Xero Automation Integration**

## Project Overview

Designed and implemented an AI powered payment verification solution that connects **Vapi AI voice assistants, Make.com automation workflows, and Xero accounting systems** to streamline customer payment checks.

The system enables staff to verify customer invoice and payment status instantly by providing a vehicle licence plate through an AI assistant, reducing manual searches and improving operational efficiency.

## Business Challenge

The client needed a faster and more efficient way to identify customers and retrieve payment information from Xero.

The key challenges included:

- Manual customer lookup processes slowing down payment verification
- No dedicated Xero field available for storing vehicle licence plate information
- Requirement for separate workflows across New Zealand and Australian operations
- Need for automated invoice notifications for customers with outstanding payments

## Solution Delivered

### AI Voice Assistant Development

Built dedicated **Vapi AI assistants** for regional payment verification:

- Drug System NZ
- LifeSaver Australia

The assistants allow staff to provide customer licence plate details through voice or text input and automatically initiate the payment checking process.

## Workflow Automation with Make.com

Developed complete automation workflows that:

- Receive licence plate requests from Vapi AI
- Process customer lookup logic
- Connect with Xero customer records
- Retrieve invoice and payment information
- Return payment status results to the AI assistant
- Trigger automated email notifications for outstanding invoices

## Xero Integration & Data Mapping

Implemented a custom lookup approach by utilizing the existing **Xero Account Number** field to store customer vehicle licence plates.

The automation uses this data to:

- Identify the correct customer record
- Retrieve invoice information
- Check payment status
- Provide accurate responses through the AI assistant

## System Workflow

### Customer Licence Plate Input

- Vapi AI Assistant
- Make.com Automation Workflow
- Xero Customer Lookup
- Invoice & Payment Verification
- AI Response + Email Notification

## Key Features

- AI voice-based customer payment checking
- Licence plate customer identification
- Automated Xero invoice verification
- Multi-region workflow architecture

- Automated outstanding payment notifications
- Reduced manual accounting operations
- Scalable AI automation framework

## **Results & Impact**

Successfully transformed the payment verification process into an automated AI-powered workflow.

The solution delivered:

- Faster customer payment verification
- Reduced repetitive administrative tasks
- Improved staff efficiency
- Seamless integration between AI, automation, and accounting platforms
- Reliable customer notification handling

## **Technology Stack**

### **AI & Voice Automation**

- Vapi AI

### **Workflow Automation**

- Make.com

### **Accounting Integration**

- Xero API

### **Automation Capabilities**

- AI Assistants
- Customer Data Lookup
- Invoice Processing
- Payment Verification
- Email Automation
