

HubSpot CRM Implementation & Granola.ai Meeting Automation Integration

Overview

Implemented and optimized a complete **HubSpot CRM environment** by transforming unstructured client data into a clean, organized, and scalable CRM system. The project involved CRM data cleanup, migration, sales pipeline configuration, deal management, and successful integration of **Granola.ai meeting intelligence with HubSpot** to improve meeting tracking and customer relationship management.

Project Objective

The goal was to establish a centralized HubSpot workspace where the client could efficiently manage contacts, companies, deals, and meeting activities. The solution focused on improving data accuracy, eliminating manual processes, and creating a smoother workflow between meeting intelligence and CRM records.

Challenges

The existing CRM setup required significant improvements:

- Client data was unstructured and required extensive cleaning before migration.
- Contact, company, and deal records were not properly organized or associated.
- Deal information required manual review and accurate creation inside HubSpot.
- Granola.ai integration was connected but the workflow was not functioning correctly, preventing meeting information from flowing into HubSpot.

Solution Delivered

I implemented a complete HubSpot CRM optimization and integration process:

- Cleaned and standardized client data according to HubSpot CRM requirements.
- Imported and organized Contacts, Companies, and Deals with proper associations.
- Created and configured 100+ deal records manually with accurate stages, values, and relationships.
- Optimized HubSpot pipelines and CRM views for better sales tracking.
- Troubleshoot and configured the Granola.ai integration workflow.

- Connected meeting notes and insights from Granola.ai into HubSpot records.
- Tested the complete workflow to ensure accurate CRM activity tracking.

Tools & Technologies

HubSpot CRM

Granola.ai

CRM Data Migration

Data Cleaning & Structuring

Sales Pipeline Configuration

CRM Workflow Optimization

Contact, Company & Deal Management

Project Outcome

Delivered a fully structured HubSpot CRM system with clean customer data, organized sales opportunities, and a successfully working Granola.ai integration.

The client now has a centralized CRM workflow where contacts, companies, deals, and meeting information are connected, improving sales visibility and reducing manual administrative work.

Key Achievements

- Complete HubSpot CRM restructuring
- Clean and accurate data migration
- 100+ deals manually created and organized
- Improved contact, company, and deal relationships
- Successful Granola.ai meeting workflow implementation
- Enhanced CRM efficiency and sales process visibility
