

HubSpot CRM Implementation & Advanced Automation System for Base

Project Overview

Implemented a complete **HubSpot CRM architecture and automation framework** for Base, enabling streamlined management of leads, applications, meetings, communications, and membership journeys.

The project involved transforming HubSpot into a centralized CRM platform by configuring data structures, building complex automation workflows, integrating third-party applications, and optimizing the complete customer lifecycle from application submission to conversion.

Business Objective

The goal was to create a scalable and automated CRM ecosystem that would:

- Improve lead and customer management
- Automate repetitive sales and marketing processes
- Create a structured application and membership journey
- Ensure accurate data synchronization across multiple platforms
- Provide better visibility into customer interactions and pipeline movement

Challenges

The existing setup required significant optimization due to:

- Complex customer lifecycle stages and qualification paths
- Manual handling of applications, follow-ups, and communications
- Data synchronization requirements between multiple platforms
- Need for customized workflow logic based on customer behavior
- Multiple communication channels requiring centralized management

Solution Delivered

HubSpot CRM Architecture

Built and optimized the CRM foundation by:

- Configuring custom HubSpot properties and objects
- Structuring contact, company, and deal relationships
- Creating lifecycle stage automation
- Mapping and optimizing deal pipelines
- Implementing CRM permissions and user access settings

Advanced Workflow Automation

Designed and deployed multiple automated workflows, including:

- Application intake and qualification workflows
- Post-call routing automation
- Booking confirmation and reminder sequences
- Lead nurturing campaigns
- Referral and nomination workflows
- Membership conversion workflows
- Payment failure recovery automation
- No-show and cancellation recovery workflows
- Long-term engagement sequences

Marketing & Communication Automation

Implemented automated communication systems including:

- Personalized email journeys through HubSpot Marketing Hub
- SMS automation using Quo integration
- Automated customer reminders and notifications
- Marketing contact synchronization
- Trigger-based communication based on customer lifecycle events

Third Party Integrations

Integrated HubSpot with:

- Make.com for advanced automation scenarios
- Quo SMS for customer messaging
- Stripe for payment event handling
- Google Calendar for scheduling automation
- Hightouch for data synchronization
- External APIs for workflow enhancements

Technical Stack

CRM & Automation:

HubSpot CRM, HubSpot Workflows, HubSpot Marketing Hub, Make.com

Integrations:

Stripe, Quo SMS, Google Calendar, Hightouch, APIs

Automation Areas:

Lead Management, Deal Pipeline Automation, Customer Journey Automation, Email Marketing, SMS Communication, Data Synchronization

Project Outcome

Delivered a fully automated HubSpot CRM ecosystem that:

- Centralized customer data and operations
- Reduced manual sales and marketing tasks
- Improved lead tracking and lifecycle visibility
- Automated customer communication across multiple channels
- Created reliable workflows for application processing, meetings, payments, and memberships
- Established a scalable CRM foundation for future business growth
