

Shopify + Zoho Healthcare Automation Ecosystem

Project Overview

Designed and implemented an end to end healthcare automation ecosystem connecting **Shopify, Zoho CRM, Zoho Forms, Zoho Writer, and Zoho Sign** to streamline the complete patient journey, from initial application submission to clinical approval, prescription signing, and secure product access.

The project focused on creating a centralized workflow where patients, pharmacists, doctors, and internal teams could collaborate efficiently while reducing manual administration and improving operational accuracy.

Business Challenge

The existing process required multiple disconnected systems to manage:

- OTC product applications
- Prescription requests
- Patient information
- Clinical reviews
- Doctor approvals
- Prescription documentation
- Secure document signing
- Shopify product access control

The goal was to eliminate fragmented workflows and build a reliable automation system where every stage of the customer journey was connected and traceable.

Solution Delivered

Built a complete automated workflow using the Zoho ecosystem integrated with Shopify, including:

Patient Application Automation

- Created automated intake workflows through Zoho Forms
- Captured and organized patient information inside Zoho CRM
- Automated application tracking and status management

Clinical Review Workflow

- Built structured review processes for doctors and clinical teams
- Enabled secure access to patient information
- Created workflows for additional information requests and follow ups

Prescription Management System

- Automated prescription document generation using Zoho Writer
- Integrated Zoho Sign for secure electronic prescription approvals
- Created automated notifications for patients and internal teams throughout the approval process

Shopify Access Automation

- Connected approved applications with Shopify customer management
- Implemented tag based access control using:
 - OTC
 - Open Prescription
- Automated product visibility and purchasing permissions based on customer approval status

Communication & Workflow Automation

- Automated email notifications and internal alerts
- Built prefilled forms to reduce repetitive data entry
- Created further information workflows for incomplete applications
- Improved communication between patients, pharmacists, and healthcare professionals

Technology Stack

Platforms & Tools

- Shopify
- Zoho CRM
- Zoho Forms
- Zoho Writer
- Zoho Sign
- Workflow Automation

- CRM Process Design
- API Integrations

Project Outcome

Delivered a fully connected healthcare automation platform that transformed a complex manual process into a streamlined digital workflow.

The solution enabled:

- ✓ Faster application processing
- ✓ Reduced administrative workload
- ✓ Improved data accuracy
- ✓ Secure prescription handling
- ✓ Automated patient communication
- ✓ Controlled Shopify product access
- ✓ Better collaboration between healthcare teams

This project demonstrates the ability to design and implement enterprise level CRM automation solutions that connect business operations, customer experience, and compliance driven workflows into one unified ecosystem.
