

Workiz CRM Automation & Real Time Job Reporting System

Project Overview

Designed and implemented an automated **Workiz CRM integration system** to streamline job management, dispatch operations, technician tracking, and reporting workflows for a field service company.

The solution connected **Workiz with Make.com and Google Sheets**, creating a centralized data pipeline that automatically captures job information, organizes operational data, and improves visibility across business teams.

Project Objective

The primary goal was to eliminate manual job tracking and create an efficient automation system that enables:

- Automated job data synchronization from Workiz
- Real time visibility into daily operations
- Improved dispatch and technician management
- Centralized reporting and performance tracking
- Reduced manual data entry and operational errors

Business Challenges

The company was managing a large volume of service jobs inside Workiz, making it difficult to maintain accurate reporting and operational visibility.

Key challenges included:

- Manual transfer of job information into reporting sheets
- Difficulty tracking technician assignments and performance
- Limited visibility into dispatch workload and completed jobs
- Need for structured reporting across multiple operational teams
- Risk of inconsistent or outdated job records

Solution Implemented

Built a complete automation workflow using **Workiz**, **Make.com**, and **Google Sheets**.

Workiz CRM Integration

- Connected Workiz data with Make.com automation scenarios
- Automated job retrieval and synchronization
- Captured important job details including:
 - Job ID
 - Customer information
 - Service address
 - Dispatcher details
 - Scheduled date and time
 - Job type/category
 - Assigned technician
 - Job status

Automated Data Processing

- Created Make.com workflows to process incoming Workiz job data
- Structured information into organized Google Sheets dashboards
- Ensured consistent data formatting for reporting and analysis

Reporting & Dashboard System

Created centralized reporting sheets for:

- Technician performance tracking
- Dispatch team monitoring
- Job volume analysis
- Revenue visibility
- Daily operational reporting

Automation Workflow

Workiz CRM → Make.com Automation → Data Processing → Google Sheets Reporting Dashboard

The workflow automatically collects job updates from Workiz and delivers organized operational data to the reporting system without manual intervention.

Tools & Technologies Used

- Workiz CRM
 - Make.com
 - Google Sheets
 - Webhooks
 - API Integration
 - Workflow Automation
 - Data Management
 - Business Reporting Dashboards
-

Project Outcome

Successfully delivered a scalable automation system that transformed Workiz job data into an organized reporting environment.

The solution helped the business:

- Save operational time through automation
- Improve job tracking accuracy
- Monitor technician and dispatcher performance
- Access structured reports instantly
- Create a reliable foundation for future workflow expansion
